

# Tipping Bucket Rain Gauge

## HD2015

### ○ WATER, SNOW OR ICE...WE MEASURE IT ALL

Versions with heating to measure  
all kind of precipitation

### ○ ACCURATE AND RELIABLE SYSTEM

Individual **calibration**  
**Internal leveling** device for  
perfect horizontal positioning

### ○ SMART DESIGN - LONG STABILITY PERFORMANCE

Corrosion resistance materials  
Rugged design

### ○ DATA WHERE YOU NEED IT

Direct **cloud visualization** when combined with  
our loggers. Or with **local database** if preferred.

### ○ WMO COMPLIANT

Developed and designed  
according to **WMO guidelines**

### Main Applications

Meteorology  
Early warning systems  
Agriculture  
Agrometeorology  
Hydrology

## 200 cm<sup>2</sup> tipping bucket rain gauge: according to recommendations of WMO

**Reliability, accuracy** and **durability**. That is the basic thought behind the design of the HD2015. Completely constructed of corrosion resistant materials, the HD2015 rain gauge is built to **withstand even extreme conditions**. To guarantee a wide range of use, depending on the environment where the rain gauge is placed, there is a choice between heated or non-heated version.

The principle of a tipping bucket rain gauge is simple: depending on the quantity of rainfall, **the tipping bucket mechanism fills and empties**. Every tipping action operates a reed contact: in this way, counting the quantity of the rainfall. This means that the tipping bucket has one enormous advantage: it needs no power supply to operate. Power supply is only a necessity when circumstances demand heating because of low environmental temperatures.

Reading the **number of counts**, in other words reading the rainfall, can be done by using a datalogger. This can be a rain indicator datalogger such as HD2013-DB as well as a datalogger of the HD33 series with built-in 4G/3G/GPRS modem for a direct communication of the measured data to the Delta OHM Cloud or a to an own secured server.

When ordering, the rain gauge is **completely setup to be used**. Easy to install, adjustable feet and leveling device integrated. Bird spikes and accessories for raised mounting available.

## Technical Specification

Principle	<b>Tipping Bucket</b>
Type of precipitation	<b>Liquid, mixed*, solid*</b>
Collector area	<b>200 cm<sup>2</sup></b>
Contact output	<b>Voltage free</b>
Power supply*	<b>12 Vdc or 24 Vdc ± 10% / 50 W</b> (to be specified when ordering)
Resolution	<b>0.1 – 0.2 or 0.5 mm/tip</b>
Accuracy	<b>± 2 % (using correction curves)</b>
Maximum rainfall rate	<b>600 mm/h (0.1 - 0.2 res. versions)</b> <b>1000 mm/h (0.5 res. version)</b>
Operating temperature range	<b>0 °C...+70 °C</b> <b>-20 °C...+70 °C*</b>
Heating intervention temperature*	<b>+4 °C</b>
Protection Degree	<b>IP65</b>
Minimum section of the wires of the connecting cable	<b>0.5 mm<sup>2</sup></b> <b>2.5 mm<sup>2</sup>*</b>

\* Specifications refer to the version with heating system HD2015R

## Ordering Codes

### HD2015

#### Mast (Ø40 mm) / bird spikes kit:

**Blank** = ground installation with feet, without bird spikes (default)  
**H0** = with support for mast installation, without bird spikes  
**H1** = 1 m mast installation kit, without bird spikes  
**H5** = 500 mm mast installation kit, without bird spikes  
**K** = ground installation with feet, with bird spikes  
**K0** = with support for mast installation, with bird spikes  
**K1** = 1 m mast installation kit, with bird spikes  
**K5** = 500 mm mast installation kit, with bird spikes

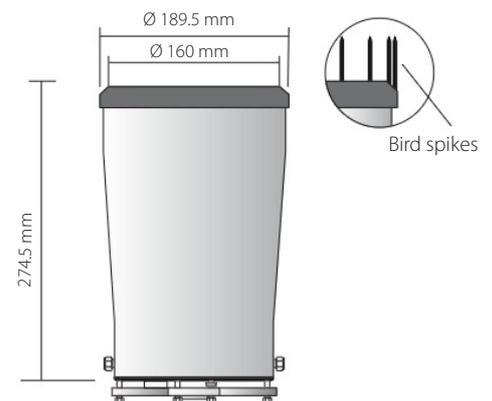

#### Heating

**Blank** = not heated (default)  
**R** = heated – power voltage 24 Vdc  
**R1** = heated – power voltage 12 Vdc

#### Resolution

**Blank** = 0.2 mm (default)  
**/1** = 0.1 mm  
**/5** = 0.5 mm

### Dimensions

The rain gauge is supplied **already calibrated** and the calibration value (resolution) is shown on the instrument label.

If the amount of rain is calculated using the correction curve as a function of the rainfall rate, the error is typically less than ± 2% in the interval 0...200 mm/h.

If the HD2013-DB data logger is used, the measurement can be automatically corrected according to the graphs available in the instrument's operating manual.

With the analog and SDI-12 output options, the curve can be stored in the rain gauge itself.

### Installation modes

The rain gauge can be installed on the ground or raised 500 mm or 1 m above the ground (see ordering codes scheme).

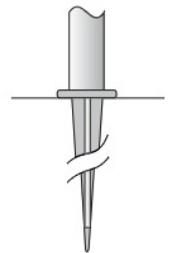

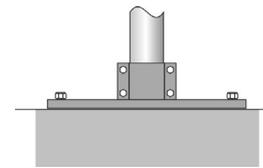

Flat base for floor fixing

Base with ground tip

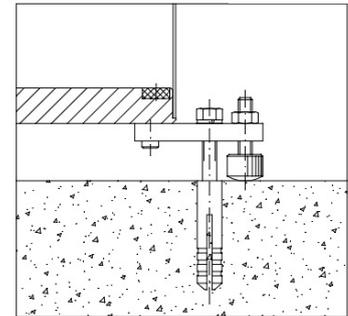

HD2003.78

HD2003.75

Raised above ground

Ground installation
